

Installing the Software

Installing from downloaded Zip file:

1. Unzip the file into an empty directory. It is important to retain the original directory structure of the files when extracting from the Zip.

For PKUNZIP, use the /d option to retain directory structure.

For WinZip95, select the Use Folder Names checkbox before extracting the files.

2. Go to the Disk 1 directory from the directory containing the extracted Backup Client files.

3. Run the Setup.exe program from the Disk 1 directory to install the Backup Client program.

To install from CD:

Insert the Installation CD in the CD drive.

1. Click on the 'free demo' button from the disk to install the Backup Client program.

Backup File Types and Descriptions

File Types created and used:

Backup Database File (.bdb)

The backup database contains your backup sets, schedules, tools, and filtered folders.

Volume Database File (.vdb)

The volume database file holds the list of files that have been backed up for a particular volume.

Filter File (.fil)

A filter file holds a filter definition which contains file types for backup inclusion or exclusion.

Compressed or FastBIT backup files (_filename.ext_)

Files that have an underscore before their name and an underscore after their extension are stored in a compressed format. These files will be present in the local cache, and may also represent files that are waiting to be transmitted to the Backup Server.

Backup Client File Descriptions:

Backup.exe Main program

AutoUp#.exe Auto Upgrade Application

Backup.l8n Multilanguage Support File

Patchw32.dll Automatic Upgrade Application

Patchbld.dll FastBIT Backup Module

Backup.hlp Online Help
